

Angiolipofibroma of the Right Colon: A Rare Type of Submucosal Polyp

Aysha Anwar Aljowder, MD* Mohamad Ali Alhamar, MD* Suhail Ebrahim Baithun,
MBBS, FRCPATH(UK)** Khalid Ahmad AlSindi, MBBS, FRCPATH(UK)***

Colorectal hamartomatous polyps originating from the submucosa represent a very small percentage of all colonic polyps. Mesenchymal hamartomatous polyps are formed by more than one type of mesenchymal tissue. We report the pathological findings of an unusual presentation of a polypoid proliferation of vascular, mature fatty and fibrous connective tissue. The histological findings support the diagnosis of a hamartoma rather than a true neoplasm.
